List of Contents

Volume 11 Number 1 **March 1994**

L. LIN, M. WAKABAYASHI and S. ADIGA — 1 Object-oriented modeling and implementation of control software for a robotic flexible manufacturing cell

J. G. LEE and H. CHUNG — 13 Global path planning for mobile robot with grid-type world model

Z. J. GENG and L. S. HAYNES — 23 A "3–2–1" kinematic configuration of a Stewart platform and its application to six degree of freedom pose measurements

E. ZUSSMAN and T. HORSCH — 35 A planning approach for robot-assisted multiple-bent profile handling

J. L. VILLARROEL and P. R. MURO-MEDRANO — 41 Using Petri net models at the coordination level for manufacturing systems control

I Software Survey Section

Volume 11 Number 2 **June 1994**

Artificial Intelligence and Advanced Computing Technologies for Space Applications

J. L. RASH — 51 Editorial

Intelligent Robotic Systems

A. LACAZE, M. MEYSTEL and A. MEYSTEL — 53 Multiresolutional schemata for unsupervised learning of autonomous robots for 3-D space operation

Y.-L. TANG and R. KASTURI — 65 Accurate estimation of object location in an image sequence using helicopter flight data

A. BOSE and A. GERB — 73 Propagating orientation constraints for the Hubble Space Telescope

A. BOKMA, A. SLADE, S. KERRIDGE and K. JOHNSON — 81 Engineering large-scale agent-based systems with consensus

Distributed Intelligence and Adaptive Systems

J. F. LEATHRUM, R. R. MIELKE and J. W. STOUGHTON — 91 Modelling heterogeneous processor scheduling for real-time systems

M. R. BARRY, K. L. SCOTT and S. P. WEISMULLER — 99 A distributed computing model for telemetry data processing

M. S. Boddy, J. A. White, R. P. Goldman and N. M. Short, Jr — 105 Planning applications in image analysis

R. J. Stewart, Y. F. Lure and C. J. Liou — 111 An adaptive technique to maximize lossless image data compression of satellite images

117 Announcement

Volume 11 Number 3 **September 1994**

Expert Systems

J. Liebowitz — 119 Preface

V. R. Milacic — 121 Designer® — Intelligent Expert System for intelligent manufacturing systems design

V. E. Theodoracatos and M. F. Ahmed — 137 ECDEX: a knowledge-based approach to conceptual design of engineering systems

S. Chiu and S. Chand — 167 A development environment for fuzzy rule-based traffic control

S. I. Yoo, Y. S. Choi and S. H. Lee — 177 Fault diagnosis in air defense artilleries using expert systems

N. Debbache and L. Abida — 187 Expert system and dynamic allocation applied to air traffic control

P. J. Harris — 195 An expert systems technology approach to maintenance proficiency

J. Debenham and J. Clark — 201 The knowledge audit

A. T. C. Goh and K. J. McManus — 213 Development of an intelligent pavement management database system

F. Coenen — 221 A binary encoded incidence matrix representation for KBS verification

H. J. Kim and H. S. Yang — 233 A fuzzy connectionist expert system for visual pattern classification

Volume 11 Number 4 **December 1994**

EURISCON '94

S. VRANEŠ and K. KHODABANDEHLOO — 245 Introduction

R. JARVIS — 249 Video plane robot swarms

A. OLLERO, A. MANDOW, V. F. MUÑOZ and J. GÓMEZ DE GABRIEL — 259 Control architecture for mobile robot operation and navigation

J. GOMEZ-ORTEGA and E. F. CAMACHO — 271 Neural network MBPC for mobile robot path tracking

P. GAUSSIER and S. ZREHEN — 279 Avoiding the world model trap: an acting robot does not need to be so smart!

L. BRIONES, P. BUSTAMANTE and M. A. SERNA — 287 ROBICEN: a wall-climbing pneumatic robot for inspection in nuclear power plants

J. P. TISDALL, D. R. BROOME and A. R. GREIG — 293 Neural network modelling of a compliant device to enhance and simplify compliant force control

R. J. RABELO and L. M. CAMARINHA-MATOS — 303 Negotiation in multi-agent based dynamic scheduling

E. OLIVEIRA — 311 Cooperative multi-agent system for an assembly robotics cell

M. M. BARATA and A. STEIGER-GARÇÃO — 319 Transputer-based multi-agent monitoring system in NC

R. TAWEGOUM, E. CASTELAIN and J. C. GENTINA — 327 Hierarchical and dynamic production control in flexible manufacturing systems

T. A. MITCHELL, J. A. CHESTNEY and M. SARHADI — 335 A prototype assembly cell for lay-up of carbon composite preforms

R. M. PARKIN and D. W. CALKIN — 345 Roadstone aggregate: an intelligent route to computer integrated manufacturing

Robotics and Computer-Integrated Manufacturing

The pre-publication e-mail contents service

- **Free of charge -** No charges - No obligations - No ties - It's free!
- **Pre-publication -** Contents pages delivered by e-mail, two to four weeks pre-publication
- **Easy to use -** No training required
- **Frequent -** Sent by e-mail on an issue-by-issue basis

Don't wait for your existing contents service to catch up!

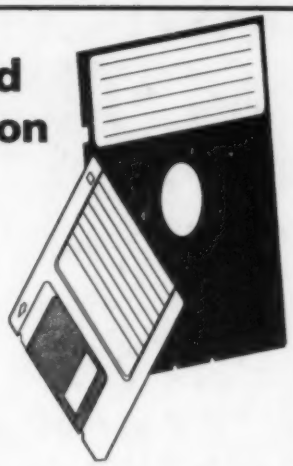
ELSEVIER SCIENCE Ltd

Elsevier Science Limited Encourages the Submission of Articles on Disk



Delivery of Electronic Files

Authors may now submit manuscripts on 3.5" or 5.25" disks.

Disks must be clearly marked with the following information:

Operating system
Disk format (e.g.DS/DD)
Word Processor used, including version number (users of T_EX see later)
Authors' names
Short title of article

Three printed copies of the final version of the manuscript should be submitted with the disk to the Journal Editor.
In the event of differences between disk and hard-copy, the hard-copy will be considered as the definitive version.

Preparing Electronic Text Files

When using a word processor to prepare a manuscript the following should be noted:

Page design will be handled by the Publisher. There is therefore no need to use formatting commands such as centring, justifying text, indenting etc.
Use the word processor's facilities to indicate the following text attributes: bold; underline; italic; subscript; superscript; strikeout.
Do not use the hyphenation facilities of your word processor.
When preparing tables use tabs, not spaces, to align columns.
When using symbols to denote special characters please supply a list of all codes used.

Use "hard returns" (i.e. using the enter key) only at the end of paragraphs. Use your word processor's "word-wrap" feature within paragraphs.
It is essential that the printed versions supplied are produced directly from the submitted electronic version.

$LaTeX$ / TeX

Authors wishing to submit their article as a $LaTeX$ / TeX file should note the following:
Authors should use the "Article" style or the Elsevier $LaTeX$ package which is available via anonymous FTP from CTAN centres.

Host names:	CTAN directory:
ftp.dante.de	/tex-archive/macros/latex/contrib/supported/elsevier
ftp.tex.ac.uk	/tex-archive/macros/latex/contrib/supported/elsevier
ftp.shsu.edu	/tex-archive/macros/latex/contrib/supported/elsevier

(Further details on TeX can be obtained from Martin Key)

Authors should not add their own macros.

Preparing Electronic Graphic Files

Illustrations ideally should be produced in the Macintosh environment using the following software packages:
(Please do not save images as postscript files)

Adobe Illustrator, Aldus Freehand, Cricket Graph, Macdraw, Chemdraw, Corel Draw-for PC

However we will accept any of the popular drawing programs for the Macintosh and PC.
Artwork should be drawn for finished size using a Times or Helvetica typeface at a final size of 8pt type with appropriate lineweights.
Please indicate format, operating system, program and version number of the software used. If possible also print a directory of filenames.
Scanned artwork should be saved to Tiff format for both line and half-tone and scanned at a suggested setting of 400 dpi for half-tones and 1000 dpi for linework. If it is necessary to compress the scans please indicate the software used. It is essential that a hard copy print of the scans be included.
Illustrations should be logically named and saved as individual files to 3.5" disk or a SyQuest cartridge 44mB or 88mB. If 3.5" disks are not available to you, 5.25" disks are acceptable. Please send a laser print of the artwork with the electronic file.
When submitting electronic colour images please indicate the file format and program used (including compression software). Include a 4 colour machine or cromalin proof and check that all the separations (if provided) are colour identified.
